Power BI DAX Formulas – Complete Guide

1. Total Sales (Measure)

Formula:
Total Sales = SUM(Sales_Fact[SalesAmount])

Use: Calculates total revenue
Why: Base KPI for all analysis

2. Total Cost (Measure)

Formula:
Total Cost = SUM(Sales_Fact[Cost])

Use: Total cost calculation
Why: Needed for profit

3. Total Profit (Measure)

Formula:
Total Profit = [Total Sales] - [Total Cost]

Use: Profit calculation
Why: Shows business performance

4. Profit Column (Calculated Column)

Formula:
Profit = Sales_Fact[SalesAmount] - Sales_Fact[Cost]

Use: Row-level profit
Why: Needed for per-transaction analysis

5. Return Flag (Column)

Formula:
ReturnFlag = IF(Sales_Fact[ReturnQty] > 0, "Returned", "Not Returned")

Use: Identify returns
Why: Helps track product issues

6. Full Name (Column)

Formula:
Full Name = Customer_Dim[FirstName] & " " & Customer_Dim[LastName]

Use: Combine names
Why: Better readability

7. YTD Sales

Formula:
YTD Sales = TOTALYTD([Total Sales], Date_Dim[Date])

Use: Year-to-date sales
Why: Track yearly progress

8. Previous Year Sales

Formula:
Previous Year Sales = CALCULATE([Total Sales], SAMEPERIODLASTYEAR(Date_Dim[Date]))

Use: Compare with last year
Why: Growth analysis

9. YOY %

Formula:
YOY % = DIVIDE([Total Sales] - [Previous Year Sales], [Previous Year Sales], 0)

Use: Growth percentage
Why: Performance tracking

10. MOM %

Formula:
MOM % = DIVIDE([Total Sales] - CALCULATE([Total Sales], PREVIOUSMONTH(Date_Dim[Date])), CALCULATE([Total Sales], PREVIOUSMONTH(Date_Dim[Date])), 0)

Use: Monthly growth
Why: Short-term trend

11. Running Total

Formula:
Running Total = CALCULATE([Total Sales], FILTER(ALL(Date_Dim), Date_Dim[Date] <= MAX(Date_Dim[Date])))

Use: Cumulative sales
Why: Trend analysis

12. Return Rate

Formula:
Return Rate = DIVIDE(SUM(Sales_Fact[ReturnQty]), SUM(Sales_Fact[Quantity]), 0)

Use: % of returns
Why: Quality metric

13. KPI Status

Formula:
KPI Status = IF([Total Sales] >= 50000, "Achieved", "Not Achieved")

Use: Target comparison
Why: Business decision

14. Sales Category (Column)

Formula:
Sales Category = SWITCH(TRUE(), Sales_Fact[SalesAmount] < 100, "Low", Sales_Fact[SalesAmount] < 500, "Medium", "High")

Use: Categorize sales
Why: Easy grouping

15. Top Product Rank

Formula:
Top Product Rank = RANKX(ALL(Product_Dim[Product Name]), CALCULATE(SUM(Sales_Fact[SalesAmount])),, DESC)

Use: Rank products
Why: Find top performers
